EDUCATION

- **Rochester Institute of Technology(RIT), Rochester** NY, USA
Master in Data Science; GPA: 3.9 Aug. 2023 – May. 2026

EXPERIENCE

- **Morningstar** Mumbai, India
Associate Software Engineer May 2021 - May 2023
 - **Frontend Engineering:** Built and enhanced portfolio analytics tools in Vue.js, improving report clarity and increasing automated test coverage across production components.
 - **Content Platform Architecture:** Designed CMS-driven FAQ system using Contentstack APIs, enabling non-technical stakeholders to manage documentation independently.

PUBLICATIONS & RESEARCH

- **Singh, A., Lyu, Z., Desell, T.** “Biologically-Inspired Homeostasis for Neuroevolution: Alternating Growth and Pruning Phases.” Accepted at *EvoStar 2026*.
 - **Large-Scale Trend Analysis:** Orchestrated a massive data initiative involving **5,000+ experimental simulations** (500 unique configurations × 10 repeats) to identify performance trends in time-series forecasting.
 - **Automated Reporting & Visualization:** Engineered automated pipelines to aggregate and visualize multi-variate metrics (MSE vs. Model Complexity), creating comparative baseline reports to identify critical performance variances.
 - **Statistical Validation:** Validated a 23% reduction in model complexity ($p = 0.0019$) while maintaining accuracy, demonstrating the ability to optimize resources and improve “forecast reliability” for complex datasets.

PROJECTS

- **Solar Energy Data Analysis & Reporting**
MySQL, Power BI, DAX
 - **Data Integration & Management:** Developed an end-to-end pipeline to integrate engineering data from MySQL to Power BI, ensuring data integrity by cleaning and validating datasets related to sustainable energy output.
 - **Actionable Reporting:** Designed interactive dashboards to visualize performance metrics and ROI, providing stakeholders with data-driven insights for sustainable energy investment and infrastructure planning.
- **End-to-End Sales Data Modeling & Analytics**
SQL Server, Power BI, ETL
 - **Data Lifecycle:** Engineered a robust data model using SQL Server, performing complex ETL transformations to clean and structure raw data for multi-dimensional performance analysis.
 - **Performance Indicators:** Created interactive Power BI reports to track key performance indicators (KPIs) and identify trend variances, enabling project managers to optimize resource allocation.
- **Regional Project Performance Visualization**
Power BI, Excel, Analytics
 - **Dashboard Development:** Coordinated with cross-functional requirements to design dynamic dashboards that visualize project timelines and metrics, reducing manual reporting time for stakeholders.
 - **Risk & Variance Analysis:** Leveraged advanced DAX calculations to identify budget-to-actual variances and potential project risks, fostering a data-driven culture within the project environment.

TECHNICAL SKILLS

- **Data Visualization:** Power BI (Advanced), Tableau, DAX, Power Query, Matplotlib, Seaborn
- **Data Management:** SQL (MySQL, SQL Server, PostgreSQL), ETL Processes, Excel (Pivot Tables, VLOOKUP, Power Pivot), Data Validation, Data Governance
- **Languages & AI:** Python, C++, Java, JavaScript, Time-Series Forecasting, Scikit-learn, Pandas, NumPy
- **Infrastructure & Tools:** Azure AI Search, Git, Docker, Kubernetes, Linux, Microsoft Office Suite
